

Profile

I am a highly organised and hardworking individual with a passion for learning and refining skills in the development area of IT. I'm diligent, patient, and have a strong work ethic based on completing tasks within deadlines and ensuring I help with the productivity of others. I am currently working as a maths teacher and I am looking to find a career where I can augment skills in developing. I have had experience with coding and programming languages within my degree, which I would like to improve further within a career that I will be successful in. With a high level of maths, an ability to grasp concepts quickly and a love for technology I would be ideal for a junior role within your company. I enjoy working as a team with people of differing backgrounds and perspectives. I have gained an array of skills in my current career that I would like to transfer to a new role in the field of development.

Education

Code Institute

February 2018 – Present: Diploma in Software Development, award pending from Edinburgh Napier University

Brighton University

September 2015 – July 2016: PGCE in teaching Mathematics, awarded July 2016
